 THE STABILITY OF AUTOMATIC REGULATION
 SYSTEMS (Ustoichivost' Sistem Avtomaticheskogo
 Regulirovaniya). Nov 60 [8]p. 1 ref. RTS 1698.
 Order from LC or S.L.A ml\$1.80, ph\$1.80 61-15210

Trans. of Prikladnaya Matematika i Mekhanika (USSR)
 1952, v. 16, no. 4, p. 495-499.

The stability problem of the system of type $(dx_s/dt) = p_{s1}x_1 + \dots + p_{sn}x_n + F_s(x_1, \dots, x_n)$, where $s = 1, 2, \dots, n$, is considered. For given conditions of $F_s(x_1, \dots, x_n)$ these functions satisfy, in the region $|x_s| \leq A$, the inequalities $|F_s(x_1, \dots, x_n)| < Q(|x_1| + \dots + |x_n|)$ where Q is a positive constant. The maximum values of this constant are found for which the equilibrium is asymptotically stable in the Lyapunov sense for any F_s function that satisfies the above conditions, and the permissible range of initial deviations are determined. A theorem in which these quantities are assessed is given: it is expressed directly in (Mathematics, TT, v. 5, no. 8) (over)
